

Advanced CSS3 & Responsive Architecture Report

Project Overview

This project transforms a semantic portfolio into a visually appealing, fully responsive website using advanced CSS3 techniques.

Key Features

- Utilize CSS Grid for two-dimensional layouts.
- Employ Flexbox for component alignment.
- Implement mobile-first responsive media queries.
- Create custom CSS variables for dynamic light/dark mode.

Folder Structure

```
responsive-portfolio/  
  ■■■ index.html  
  ■■■ css/style.css  
  ■■■ js/script.js  
  ■■■ images/  
  ■■■ README.md
```

Expected Outcome

A pixel-perfect, highly responsive website that adapts across mobile, tablet, and desktop devices.

Conclusion

The project demonstrates responsive web design using CSS Grid, Flexbox, media queries, and CSS variables with a light/dark theme.
